

ABSTRACT

The invention concerns a coloured soda-lime glass deep coloured with a green-to-blue shade. It contains
5 0.40 to 0.52 wt. % of FeO, present under illuminant A and for a glass thickness of 4mm, a light transmittance (TLA4) less than 70%, a selectivity (SE4) higher than 1.65 and an ultraviolet radiation transmittance (TUV4) less than 8%. Said glass is particularly suited for
10 lateral rear glazing and rear glazing for motor vehicles.
